

that you are supposed to be a store clerk calling to check out the card for a purchase. Act like you are talking with a customer when he/she "cancels".

#### *Step Four: The drop*

Once the cards are cleared, you must find a place to have the package sent. NEVER use a drop more than once. The following are typical drop sites:

##### [1] An empty house

An empty house makes an excellent place to send things. Send the package UPS, and leave a note on the door saying, "UPS. I work days, 8 to 6. Could you please leave the package on the back door step?" You can find dozens of houses from a real estate agent by telling them you want to look around for a house. Ask for a list of twenty houses for sale, and tell them you will check out the area. Do so, until you find one that suits your needs.

##### [2] Rent A Spot

U-Haul sometimes rents spaces where you can have packages sent and signed for. End your space when the package arrives.

##### [3] People's houses

Find someone you do not know, and have the package sent there. Call ahead saying that "I called the store and they sent the package to the wrong address. It was already sent, but can you keep it there for me?" This is a very reliable way if you keep calm when talking to the people.

Do NOT try post office boxes. Most of the time, UPS will not deliver to a post office box, and many people have been caught in the past attempting to use a post office box. Also, when you have determined a drop site, keep an eye on it for suspicious characters and cars that have not been there before.

#### *Step Five: Making the transaction*

You should now have a reliable credit card number with all the necessary billing information, and a good drop site.

The best place to order from is catalogues, and mail order houses. It is in your best interest to place the phone call from a pay phone, especially if it is a 1-800 number. Now, when you call, don't try to disguise your voice, thinking you will trick the salesperson into believing you are an adult. These folks are trained to detect this, so your best bet is to order in your own voice. They will ask for the following: name, name as it appears on card, phone number, billing address, expiration date, method of shipping, and product. Ask if they offer UPS Red shipping (next day arrival), because it gives them less time to research an order. If you are using American Express, you might have a bit of a problem shipping to an address other than the billing address. Also, if the salesperson starts to ask questions, do NOT hang up. Simply talk your way out of the situation, so you won't encourage investigation on the order.

If everything goes right, you should have the product, free of charge. Insurance picks up the tab, and no one is any wiser. Be careful, and try not to order anything over \$500. In some states, UPS requires a signature for anything over \$200, not to mention that anything over \$200 is defined as grand theft, as well as credit fraud. Get caught doing this, and you will bite it for a couple of years. Good luck!

### **3. Making Plastic Explosives from Bleach by The Jolly Roger**

Potassium chlorate is an extremely volatile explosive compound, and has been used in the past as the main explosive filler in grenades, land mines, and mortar rounds by such countries as France and Germany. Common household bleach contains a small amount of potassium chlorate, which can be extracted by the procedure that follows.

First off, you must obtain:

- 1.A heat source (hot plate, stove, etc.)
- 2.A hydrometer, or battery hydrometer
- 3.A large Pyrex, or enameled steel container (to weigh chemicals)
- 4.Potassium chloride(sold as a salt substitute at health and nutrition stores)

Take one gallon of bleach, place it in the container, and begin heating it. While this solution heats, weigh out 63 grams of potassium chloride and add this to the bleach being heated. Constantly check the solution being heated with the hydrometer, and boil until you get a reading of 1.3. If using a battery hydrometer, boil until you read a FULL charge.

Take the solution and allow it to cool in a refrigerator until it is between room temperature and 0°C. Filter out the crystals that have formed and save them. Boil this solution again and cool as before. Filter and save the crystals.
